

Automated Resume Analyzer For Job Portals

1.Introduction

The Automated Resume Analyzer is a data science-based project designed to analyze resumes in PDF format. It helps in extracting important information such as skills and matching them with job requirements.

2. Objective

- To automate the resume screening process
- To extract key skills from resumes
- To match skills with job requirements
- To generate a score based on matching

3. Technologies Used

- Python
- Streamlit
- PyPDF2
- Pandas

4. Working Process

- i. User uploads a resume in PDF format
- ii. The system extracts text from the resume
- iii. Skills are identified from the extracted text
- iv. The extracted skills are compared with predefined job skills
- v. A score is generated based on matching
- vi. The result is displayed along with visualization

5. Features

- Upload resume (PDF)
- Automatic skill extraction
- Skill matching
- Score calculation
- Graphical representation
- CSV file download

6. Conclusion

This project reduces manual effort in resume screening and provides a fast and efficient way to analyze resumes using data science techniques.
