📁 Employment History

Full-stack Developer and UX Designer at Eban Register

Jan 2020

- **Spearheaded** end-to-end design and development of **ebanregister.com** as the **sole developer**—an attendance & HR platform born as a pet project and now adopted by major organizations across Ghana.
- **Engineered** all backend APIs with **NestJS** and **TypeScript**, persisting data in **PostgreSQL**.
- **Built** the cross-platform self-service app (mobile & web) in **React Native**, and the **admin dashboard** in **Vue.js**.
- **Architected** a low-latency, real-time notification service (WebSockets + geolocation + **Redis** + bull jobs + push messaging) to capture attendance instantly.
- **Developed** the full HR suite—Payroll, Document Management, Leave & Time-Off, Appraisals, and more—leveraging **AWS**, **GCP** and other supporting services.
- **Provisioned** and **administered** a bare-metal Ubuntu droplet to host and orchestrate all services.
- **Established** CI/CD pipelines with automated monitoring & alerting (LOKI/Prometheus/Grafana), ensuring 24×7 availability and rapid, sub-hour incident response.

Fullstack Engineer at Klarna, Berlin

Jun 2023

- Develop and maintain end-to-end tracking functionality across front-end and back-end systems, ensuring customers always know exactly where their orders are.
- Improved UX and enhanced error-handling logic, cutting customer-reported tracking issues by 20%.
- Collaborate closely with other teams to iterate on features, improve performance, and elevate the overall delivery experience.

Frontend Developer at Clark GMBH

Jan 2022 — Dec 2022

- Working closely with designers to define and implement great user experiences across web and mobile. Helping identify and outline improvements and features for our product. Participating in our community of practice, Pair programming, reviewing pull requests- all the good stuff

Full-stack Developer at ePareto Info Systems

Oct 2017 — Sept 2021

I was a senior developer in a team to develop a complete hospital management system serving 300+ hospitals and their branches. I developed most major backend modules in php (Laravel) or Node.js and also developed the frontend modules in Ember.js, Vue.js, and React.

Full-stack Developer at Open Source

Aug 2019 — Aug 2021

A contributor to SORMAS, a project used in over half a dozen counties for COVID-19 surveillance. I contribute to the web admin in java and mobile app also in java. My barcode feature has increased productivity for lab users to a 90% rate in sample management compared to their manual sample search. <https://sormas.org>

Full-stack Developer at Freelancer

Jan 2017

My software engineering journey started as a freelancer working on native mobile and desktop applications. I was developing mobile apps using Java and developing desktop applications with c#.

I then started working on frontends using React, Ember, and VueJS. My Journey with the backend started with PHP but later leaned more into developing backends with node

🎓 Education

Bachelor's Degree, Valley View University , Ghana-Accra

Aug 2012 — Jun 2016

Information technology
